

An aerial photograph of a tropical island, likely Natuna Island in Indonesia. The image shows a vibrant turquoise sea in the foreground, transitioning to a sandy beach lined with numerous palm trees. Large, smooth boulders are scattered along the shoreline and in the shallow water. In the background, a dense forest of palm trees covers the island, with distant mountains visible on the horizon under a clear blue sky.

OVERVIEW

Natuna island has a lot of potentials to offer. With its strategic location in Indonesia's outermost northern border islands in the Riau Archipelago, on the west side of the South China Sea, and between Singapore, the Malaysian Peninsula on one side and East Malaysia on Borneo on the other, the island is now fast growing into a favorite playground for yachters, more so ever since Indonesia eased entry regulations for yachts to sail into Indonesian seas.

According to the research team of Purnomo Yusgiantoro Center, there is a potential to develop special economic zone in East Natuna, including the fact that Natuna has 19 oil and gas working areas in West Natuna Block with both exploration and production status, owns a massive oil and gas resource (probably the biggest that Indonesia ever has), and the island is widely popular for its shallow fishing area. The great geographical location and oceanographic condition of Natuna also contributes to the high potential of fisheries, oil, and natural gas, like what was stated on *Natuna in Numbers 2022* that the captured fisheries production was up to 132,632.65 tons.

Other interesting findings, according to *Utilization and Linkage of Oceanic Energy in Natuna Island: A Review* in 2021, Natuna is famous for aquaculture fisheries of Napoleon with allowed export-capacity up to 30,000 kilograms. However, the research also mentioned, that the utilization of Natuna has not been maximized enough and the resource development in Natuna is often constrained by poor infrastructure.

Years ago, Natuna still faced a challenge on security and defense, but looking into what the government has acted right now, Natuna is now equipped by strong military to prevent other countries' invasions. To date, Indonesia's government has also taken strict actions to unleash Natuna potential, one of them is to explore oil and gas from the island. The government has also set three programs for oil and gas development in the Natuna Island, which are the preparation of regulations for the development of Natuna, changes in fiscal terms so that oil and gas fields are economical to develop, also additional exploration time such as an extension of the time for drilling exploration wells.

In addition, people in Natuna are open to investment. It becomes a great opportunity for companies to invest, considering that the result of *Natuna in Numbers* research revealed that the economic growth of Natuna has increased 0.02% and the tourism visitors has also grown up to 78,297 people in 2021.

This is an exciting investment news from Natuna Islands

Natuna Island holds great economic opportunities. One of the sectors that has huge potential is fisheries. Natuna Island has become the world's busiest shipping and fishing routes, with enormous potential of fishery resources.

According to Indonesia Central Bureau of Statistics in 2021, Natuna islands had succeeded in captured 132,632.65 tons of fish. Fishery sector contributed 0.2% (Rp0,8 trillion) to the realization of domestic investment within January - September 2021.

Several challenges for fisheries sector in Natuna are unprepared infrastructure and public awareness of sustainability issues.

The tourism potential in Natuna Island

Natuna the hidden island in the middle of the ocean, promises a genuine experience into unspoiled splendor. Mountain peaks that slope down to calm sand beaches and colorful coral reefs that are visible through the clear waters may be found here. Another potential tourism destinations in Natuna are waterfall and historical sites.

The tourism industry in Natuna Island has been growing rapidly, according to the number of hotels that are available on the islands. To date, in 2021, Indonesia Central Bureau of Statistics has recorded that there are 41 hotels/accommodations available in the area.

Geopark

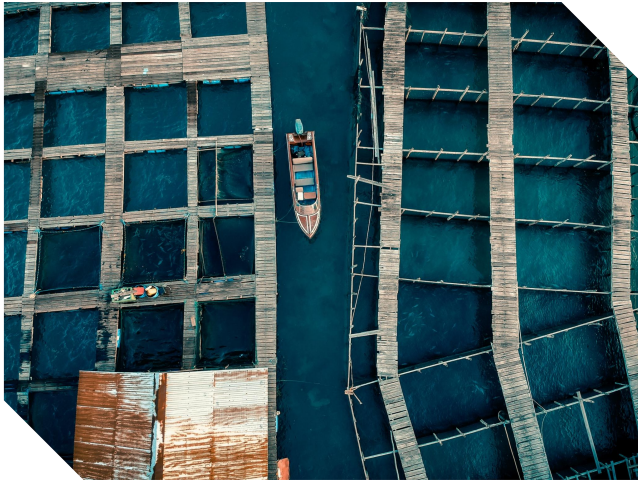

Natuna has been set as a National Geopark Area on 29 November 2018. Later, the geopark area will be proposed to the UNESCO Global Geopark to become a world Geopark.

According to the Regional Development Planning Agency of Natuna, currently there are eight geopark site, namely:

- Tanjung Datuk
- Gunung Ranai
- Pulau Setanau
- Pulau Akar
- Batu Kasah
- Senubing
- Pulau Senua
- Gua dan Pantai Kamak

Alif Stone Park

To make working conditions safer, the Indonesian government has also legitimated UU Cipta Kerja, a law to protect and guarantee the prosperity of workers in Indonesia, such as preventing them from being fired without any severance pay.

Not only for workers, this law also attracts investment by providing ease for companies to invest. UU Cipta Kerja also simplifies the fishermen permission.

With the law, Natuna's potential is predicted to be unleashed beyond, with the economic growth that is possible to increase every year.
